NETFLIX | Global Streaming Intelligence Suite – Content Performance

Report prepared and analytics conducted by Soham S. Amburle | 19 March 2026

The Content Performance Dashboard provides a detailed and interactive analysis of how content performs within a simulated global streaming platform inspired by Netflix. Built using Power BI and a synthetic dataset of approximately 2,394 records, the dashboard leverages a snowflake schema data model to replicate real-world streaming analytics.

This dashboard is designed to answer key business questions such as:

- Which content titles generate the highest watch time?
- How is engagement distributed across genres and content types?
- What is the overall viewer satisfaction based on ratings?
- Which titles are most highly rated by audiences?
- How effectively is content being consumed (completion rate)?

Through a combination of KPI indicators, charts, and interactive slicers, the dashboard enables both executives and analysts to explore content performance from multiple perspectives.

Dashboard Storyline

The dashboard follows a structured analytical flow that guides users from a high-level performance overview to detailed content insights.

The first section presents a set of KPI cards that summarize the overall scale and effectiveness of content consumption. These metrics provide a quick understanding of engagement levels, audience reach, and content quality.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

The second section focuses on content engagement patterns. Users can identify which titles and genres generate the highest watch time and understand how different content types contribute to overall platform engagement.

The final section highlights content quality and audience perception through rating-based analysis, enabling stakeholders to identify highly rated titles and evaluate user satisfaction.

This structured approach ensures both quick insights and deep analytical exploration.

Dashboard Elements

The dashboard consists of three main components:

- KPI Cards for performance summary
- Interactive Slicers for filtering
- Visual Charts for content analysis

Together, these elements create an intuitive and interactive analytical experience.

KPI Cards

Seven KPI cards provide a high-level summary of content performance:

1. **Total Watch Hours**: Represents total viewing time across all content.
2. **Total Streams**: Indicates total number of viewing sessions.
3. **Unique Viewers**: Shows the number of distinct users consuming content.
4. **Average Watch Time**: Measures average engagement per session.
5. **Completion Rate (%)**: Indicates how often content is fully watched.
6. **Average Rating**: Reflects overall audience satisfaction.
7. **Total Content Titles**: Shows the size of the content catalog.

These KPIs provide a quick snapshot of engagement, reach, and quality.

Slicers

Seven slicers enable dynamic filtering across key dimensions:

1. Content Type
2. Genre
3. Language
4. Release Year
5. Country
6. Date (Year/Month)
7. Device Type

These filters allow users to analyze performance across content categories, regions, time periods, and platforms.

Main Visualizations

The dashboard includes four primary visuals:

1. **Top 10 Content by Watch Hours (Bar Chart):** Highlights the most-watched content, helping identify high-performing titles.
2. **Watch Hours by Genre (Column Chart):** Shows how engagement is distributed across genres, revealing audience preferences.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

3. **Watch Hours by Content Type (Donut Chart):** Provides a proportional view of engagement between movies and series.
4. **Top 10 Content by Average Rating (Bar Chart):** Identifies the highest-rated content, offering insight into audience satisfaction.

These visuals provide a clear understanding of both content popularity and quality.

Business Value

This dashboard delivers key analytical benefits:

- Identifies top-performing content driving engagement
- Helps understand audience preferences across genres and formats
- Evaluates content quality through rating analysis
- Supports strategic decisions for content acquisition and production
- Enables targeted content recommendations based on performance trends

Overall, the dashboard serves as a content intelligence tool, helping stakeholders optimize content strategy and maximize user engagement.

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
  - Fact Tables
    - Fact_WatchHistory
    - Fact_Subscriptions
    - Fact_Ratings
  - Dimension Tables
    - Dim_Users
    - Dim_Content
    - Dim_Time
    - Dim_Geography
    - Dim_Genre
    - Dim_Language
    - Dim_Device
    - Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
