NETFLIX | Global Streaming Intelligence Suite – Revenue Analytics

Report prepared and analytics conducted by Soham S. Amburle | 13 March 2026

The Revenue Analytics Dashboard provides a focused analytical view of how revenue is generated across a simulated global streaming platform inspired by Netflix. The purpose of this dashboard is to help stakeholders understand the platform's financial performance by examining revenue distribution across subscription plans and geographic markets.

The dashboard is developed in Power BI using a synthetic dataset designed to replicate the structure of real-world streaming analytics environments. Although the dataset contains approximately 2,394 records, it follows a snowflake schema data model commonly used in enterprise business intelligence systems. This model separates transactional data from descriptive attributes, enabling scalable analytics and flexible filtering across multiple dimensions.

The dashboard is designed to answer several important financial and operational questions:

- What is the total revenue generated by the streaming platform?
- How many active subscriptions contribute to the platform's revenue?
- What is the average revenue generated per user (ARPU)?
- Which countries and regions contribute the most revenue?
- How is revenue distributed across subscription plans?

By combining KPI indicators, geographic analysis, and interactive filtering, the dashboard provides a clear and concise view of revenue performance.

Dashboard Storyline

The dashboard follows a logical analytical flow that guides users from a high-level financial overview toward deeper insights into geographic and subscription-based revenue distribution.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

First, the dashboard establishes the overall scale of revenue through a set of KPI indicators. These metrics provide an immediate snapshot of the platform's financial health, including total revenue, subscriber counts, and the contribution of active subscriptions.

Next, the analysis focuses on subscription plan performance. This section helps stakeholders understand how different pricing tiers contribute to the platform's overall revenue.

Finally, the dashboard shifts toward geographic revenue distribution. By analyzing revenue across countries and regions, users can identify which markets generate the largest share of revenue and where potential growth opportunities may exist.

This layered analytical structure ensures that users can quickly understand the big picture while also having the flexibility to explore deeper insights through interactive filters.

Dashboard Elements

The dashboard is composed of three primary analytical components:

- KPI Cards that summarize core revenue metrics
- Interactive Slicers that allow dynamic filtering
- Visual Charts that display revenue distribution and comparisons

Together, these elements create an intuitive and interactive analytical environment for exploring revenue performance.

KPI Cards

Five KPI cards provide a quick overview of key revenue metrics.

1. **Total Revenue**: Displays the total monthly revenue generated from subscriptions.
2. **Total Active Subscriptions**: Represents the number of currently active subscription records.
3. **Average Revenue per User (ARPU)**: Indicates the average revenue generated per subscriber.
4. **Total Subscribers**: Shows the total number of unique users subscribed to the platform.
5. **Revenue per Subscription Plan**: Highlights revenue contribution across different subscription tiers.

These KPIs allow users to quickly assess the scale and structure of platform revenue.

Slicers

Six slicers allow users to dynamically filter the dashboard across multiple dimensions.

The slicers included in the dashboard are:

1. Continent
2. Country
3. Subscription Plan
4. Year
5. Quarter
6. Month

These filters allow analysts to examine revenue patterns across geographic regions and subscription tiers. All visuals respond interactively to these slicers, enabling flexible data exploration.

Main Visualizations

The dashboard contains four main visuals that present revenue distribution insights.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.

1. **Revenue by Subscription Plan (Donut Chart):** Shows the share of total revenue contributed by each subscription plan. This visual helps evaluate the relative popularity and financial contribution of each pricing tier.
2. **Revenue by Country (Line Chart):** Compares revenue across different countries, helping identify the platform's strongest revenue-generating markets.
3. **Revenue by Region (Clustered Column Chart):** Displays revenue distribution across broader geographic regions, allowing users to evaluate regional market performance.
4. **Revenue by Subscription Plan (Clustered Column Chart):** Provides another comparative view of subscription plan revenue, making it easier to identify which pricing tiers drive the most revenue.

Together, these visuals provide a clear and intuitive understanding of how revenue is distributed across both geography and subscription plans.

Business Value

This dashboard provides several valuable analytical benefits.

It allows stakeholders to quickly evaluate overall revenue performance and identify the subscription plans that contribute the most to platform earnings. By examining geographic revenue distribution, decision-makers can also identify which regions and countries represent the platform's most profitable markets.

Additionally, the interactive filtering capabilities allow analysts to explore revenue performance from multiple perspectives, enabling more flexible and detailed analysis.

Overall, the dashboard serves as a concise revenue intelligence view, providing key insights into subscription-based revenue generation across a global streaming platform.

Tools and Data

- Visualization Tool: Power BI
- Dataset: Synthetic global streaming platform dataset
- Total Records: Approximately 2,394 rows across all tables
- Data Model: Snowflake schema
- Tables Used in the Dashboard:
  - Fact Tables
    - Fact_WatchHistory
    - Fact_Subscriptions
    - Fact_Ratings
  - Dimension Tables
    - Dim_Users
    - Dim_Content
    - Dim_Time
    - Dim_Geography
    - Dim_Genre
    - Dim_Language
    - Dim_Device
    - Dim_SubscriptionPlan

The dataset was generated using Mockaroo to simulate typical streaming analytics scenarios such as subscriber distribution, subscription plans, global geography, and viewing behavior.

Data Disclaimer: This dataset is synthetic and created solely for learning, analysis, and portfolio demonstration. It does not represent real user data or actual activity from Netflix or any streaming platform.
